HOW TO REMODEL A CAMPER FAST AND EASY

- 1 Remove the valances, unscrew them, and just keep the blinds on the windows. Instead of valances add curtain rods and hang curtains. Or cover the valances with a different fabric.
- 2 Now clean the camper thoroughly, wipe down the walls with warm water and detergent to get rid of any grease and spider webs.
- 3 Clean the kitchen cabinets with Deglosser to get rid of any nasty grease and fat
- 4 Select your color scheme and paint the walls in a light color. Use good interior paint with primer in a semi gloss or satin finish. (Sherwin Williams, Behr, Benjamin Moore).
If the walls look really bad, you might want to consider using a Kilz Primer before painting. [Link Kilz Primer](#)
- 5 Then paint the cabinets, the cabinet doors and wood trim twice with Milk Paint from General Finishes. Use a small foam roller and a brush. No need to sand or prime, but the cabinets have to be really clean. [Link Milk Paint](#)

- 6 Use the same Milk Paint for the bathroom/bedroom door. Just use a bigger foam roller. Add 2 coats of paint.
- 7 Apply 3 layers of Top Coat from General Finishes over the paint for protection - do not skip this step! [Link Top Coat](#)
- 8 Add a fancy self-adhesive backsplash in your kitchen area.
- 9 If the floor looks bad, use peel and stick vinyl tiles to cover it up. I used light grey vinyl planks and they look really good after 2 years now. Other option is to add a colorful runner over the old linoleum to hide the dated look.
- 10 Add pretty accessories like pillows, hooks, storage bins, an entrance mat etc. You can add wall decor either using command hooks or museum putty to keep it on the walls.
